Academic Credentials

- **Daffodil International University** **Dhaka, Bangladesh**
  Graduated with Honors, B.Sc. in Computer Science and Engineering ***Dec 2019 – Mar 2024***
  CGPA: **3.86** out of **4.00**
  Relevant courses: Algorithms, Operating systems, Data structures, Data mining, Database management system, Artificial intelligence, Software engineering

Professional Experience

- **Junior Software Engineer** **Dhaka, BD**
  Omukk | Python, FastAPI, Redis, PostgresSQL *Sep 2026 – Present*
  - Building an AI-based marketing engine that centralizes paid ad management and customer conversations for clients, streamlining campaign operations and communication workflows from a single platform.

- **Full Stack Developer Intern** **Dhaka, BD**
  DeshIt BD | React, Node.js, Express.js, MongoDB, Tailwindcss *Jan 2025 – Apr 2025*
  - Led the full-stack development of a POS system, architecting major modules like inventory and expense management.
  - Scaled the application from a basic MVP to a comprehensive product serving **20+ active restaurant clients**, executing weekly feature rollouts based on client requirements.

- **AI Data Annotator** **Remote**
  Outlier AI *Jun 2024 – Sep 2024*
  - Authored complex coding scripts in Python, C++, JavaScript, and SQL to fine-tune the model's understanding of different syntax and frameworks.

Projects

- **Search Engine** | *Go* Source code
  - Built a full-text search engine in Go targeting pkg.go.dev/std — concurrent BFS crawler (worker pool), inverted index with TF-IDF ranking, and a query pipeline with tokenization, stop-word filtering, and stemming
  - Implemented domain-aware relevance boosting (URL-segment and title matching on top of TF-IDF scores)

- **Best Tuition BD** | *React, Node.js, MongoDB*
  - Architected a production tuition marketplace connecting students/guardians with qualified tutors.
  - Designed and implemented an end-to-end request–application–approval workflow to manage users, requests, assignments, and platform content.

- **Pandamarks** | *React, Shadcn, Framer motion, Redux, Express, MongoDB* Link
  - Web application to streamline the way users save, organize, and retrieve their favorite websites
  - Focused on presenting user bookmarks in a visually appealing way

- **Solar System** | *C++, OpenGL, GLUT* Source code
  - Solar system animation using OpenGL and GLUT, showcasing detailed 2D models (planets, moons, and other celestial bodies)

Technical Skills

- **Programming Languages:** C++, JavaScript, Python, GoLang, HTML, CSS, SQL
- **Frameworks, Libraries & Databases:** FastAPI, React, Redux, Node.js, Express.js, MongoDB, PostgreSQL, Redis
- **Developer Tools:** Git, GitHub, Postman, Claude code

Interests

- Competitive programming and algorithmic problem solving
